

Operational Blueprint

NHID-Clinical v1.3 · From RFP Language to Audit-Ready Production

v1.3

June 2026 · CC BY 4.0

■ NHID-Clinical is an early-stage open proposal by Brianna Baynard. It is not an accredited standard or regulatory requirement.

Five-Layer Trust Stack

Layer 0 · NPI Gap

The problem — no cross-org NPI auth

Layer 1 · STIR/SHAKEN

RFC 8224 — carrier number auth (A/B/C attestation)

Layer 2 · NHID-Clinical v1.3

Behavioral baseline — 4 controls, 5 CTS tests

Layer 3 · NHID-Auth v2

Cryptographic agent identity — Ed25519, NPI binding

Layer 4 · FHIR / OpenTelemetry

Healthcare-native audit + SIEM export

Implementation Phases

Phase 1 · Weeks 1–2 — Add RFP Language

Insert the standard NHID-Clinical conformance clause into your next voice AI vendor RFP or BAA amendment. One clause covers all four controls.

Phase 2 · Weeks 3–6 — Vendor Sandbox Testing

Ask your vendor to run: `git clone + pip install -r requirements.txt + python -m pytest tests/ -v`. Results in under 5 minutes. Request full terminal output.

Phase 3 · Weeks 7–10 — Validate Logs Yourself

Place vendor JSON traces in the `traces/` folder. Run the test suite. Manually verify: disclosure before NPI, no deceptive artifacts, escalation fires in ≤ 2 s.

Phase 4 · Weeks 11–12 — Measure & Decide

Compare verification latency (target < 5 s) and escalation volume (target $> 30\%$ reduction). Use findings to update vendor contract requirements.

Standard RFP / BAA Clause

"The vendor's AI agent SHALL produce NHID-Clinical v1.3 JSON trace logs for all B2B administrative calls, including disclosure timestamps and opt-out handling. The payer may run the open-source conformance test suite against vendor output at any time."

Target Metrics

Metric	Today (typical)	Target with NHID-Clinical
Verification latency	3–5 min or call terminated	< 5 seconds
Audit effort per vendor	Manual call review (hours)	~2 minutes (run test suite)
RFP disclosure language	Custom per vendor	One standard clause
Escalation response time	Untracked	≤ 2 seconds, logged

Beacon — Reference Voice Agent

Beacon (agent_4001krn32nmwe5t8mqzgee0w84rj)

Outbound AI caller checking claim status on behalf of dental providers. Voice: Eryn (ElevenLabs). LLM: Gemini 2.5 Flash. First utterance discloses AI status. Consent obtained before any PHI. Every call produces a machine-readable audit trace. Try it: nhid-clinical.org → 'Receive a Call from Beacon'

Regulatory Alignment

Regulatory Driver	Specific Requirement	NHID-Clinical Control
CMS-0057-F	FHIR API, 72hr turnaround, 5yr log	FHIR AuditEvent + ATR-01
MACPAC May 2026	AI transparency, human review	EIT-01 + ATR-01
DOJ FCA 2026	Explainability + audit trail	LOG + CTS evidence
State AI Laws	Inspectable, auditable decisions	IDG-01 + DBC-01
NIST CAISI 2026	Cross-org agent identity	NHID-Auth v2
